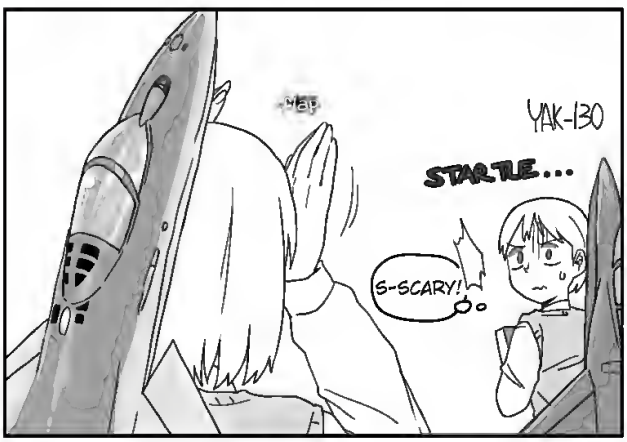
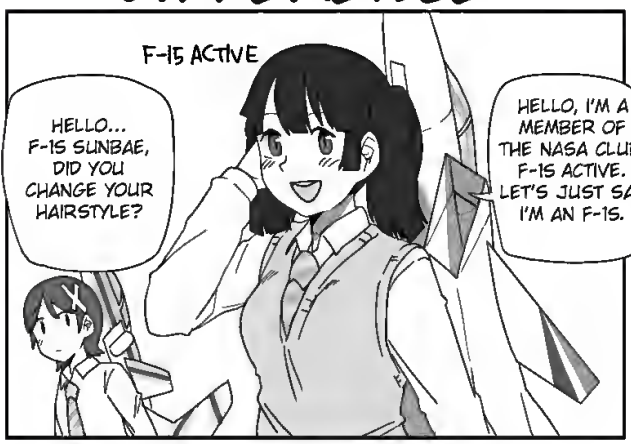
I CAN DO IT TOO!

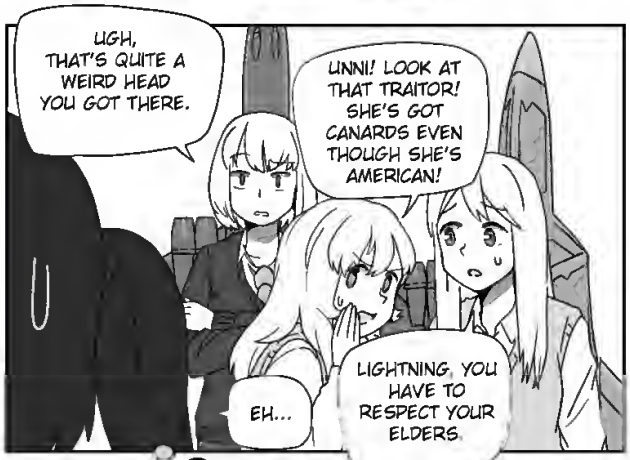
Canard means duck in french



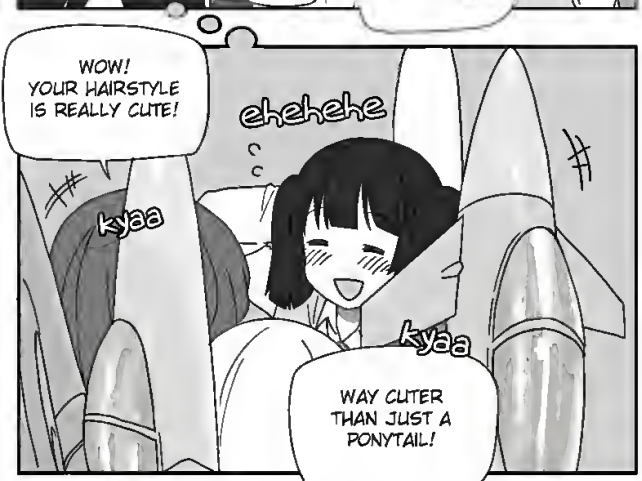
TEMPERATURE DIFFERENCE



F-15 ACTIVE
HELLO... F-15 SUNBAE, DID YOU CHANGE YOUR HAIRSTYLE?
HELLO, I'M A MEMBER OF THE NASA CLUB, F-15 ACTIVE. LET'S JUST SAY I'M AN F-15.

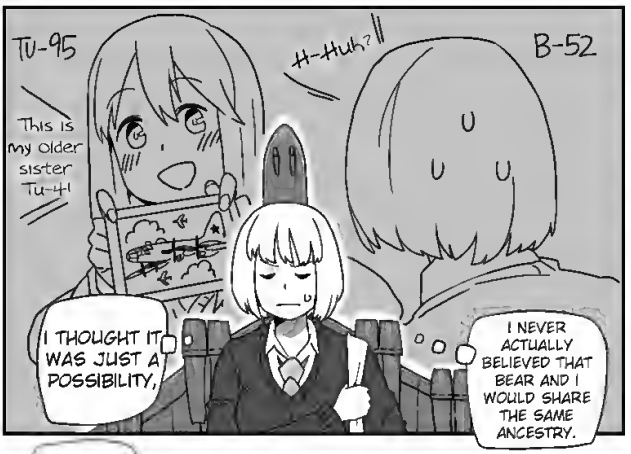


UGH, THAT'S QUITE A WEIRD HEAD YOU GOT THERE.
UNNI! LOOK AT THAT TRAITOR! SHE'S GOT CANARDS EVEN THOUGH SHE'S AMERICAN!
EH...
LIGHTNING, YOU HAVE TO RESPECT YOUR ELDERS.

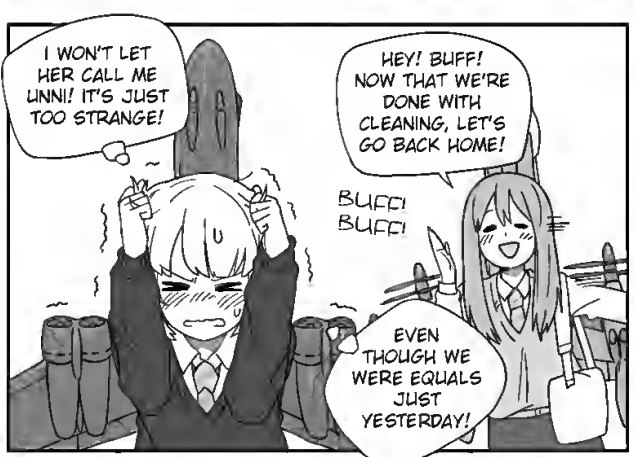


THE ATTACK AIRCRAFT THE NAVY LOVED

UNEXPECTED RELATIONS



Tu-95
B-52
H-Huh?
This is my older sister Tu-4!
I THOUGHT IT WAS JUST A POSSIBILITY,
I NEVER ACTUALLY BELIEVED THAT BEAR AND I WOULD SHARE THE SAME ANCESTRY.



I WON'T LET HER CALL ME UNNI! IT'S JUST TOO STRANGE!
HEY! BUFF! NOW THAT WE'RE DONE WITH CLEANING, LET'S GO BACK HOME!
BUFF! BUFF!
EVEN THOUGH WE WERE EQUALS JUST YESTERDAY!

Anyan's comments:

T-50 PAKFA also has the special capability of moving its LERX.

F-15ACTIVE is an experimental aircraft from NASA, with a canard and a three dimensional TVN. It was decommissioned in 2009, and the canards are actually transplanted F/A-18 stabilators.

The new character A-6 Intruder, dubbed the B-52 of the Navy, is an aircraft with a formidable amount of warhead payload capacity. When the A-6 was decommissioned, the Super Hornet took its place.

When you trace the ancestry of the Tu-95, you will find the Tu-4 which is the product of reverse engineering the B-29. Just as the B-52 succeeded the B-29, the Tu-95 succeeded the Tu-4: I guess you can say that the Tu-95 and the B-52 are in a sisterly relationship. How ironic is it that the two bombers ready to carpet each other's superpowers with nukes share the same ancestor!

I'm happy that I could finish this release before leaving for my trip to Japan on Friday! It was a little hastily done... but it was my first release after a nice rest after the Seoul Comic Festival.
